[REDACTED] the interior was being completed at all 11 workshops of the Ludwigsfelde-Genshagen Motor Plant, formerly Daimler-Benz. Workshops 8 and 9 were nearing completion and workshop 9 was scheduled to start the production of small parts, such as discs, screws and bolts, [REDACTED] It could not be determined for what kinds of motors these parts were to be manufactured. Thirty lathes, 13 milling machines and 12 boring machines were stored in the gymnasium of the apprentices' quarters, opposite the plant, at the Birkengrund-Nord stop. These machines were gradually moved to the plant. There was a serious lack of special machines. The firms to supply these machines could not meet the target date fixed for their delivery. [REDACTED] full production could not be started before June 1953.
